

SharePoint is the business collaboration platform for the Enterprise and the Internet.

When people need to work with other people, with content and information, or with line-of-business data, they can use the rich, out-of-the-box set of integrated capabilities in the SharePoint platform. People can also customise these capabilities to address specific business needs and integrate them with other products and solutions. Using the same set of capabilities and tools, companies can deploy SharePoint both inside the enterprise (that is, intranets) and outside of the firewall (that is, extranets, the Internet) so employees, customers, and business partners can work with the platform.
